

OMT in Sports Medicine August 2021

Phillip A. Nokes, D.O.

**Former director of the manual medicine
for the OSU Sports Medicine Fellowship
at the Stillwater Campus 1996 to 2005**

**I would like to
dedicate this
lecture in memory
of Ken Smith, D.O.**

**The first osteopathic
physician to serve as the
team physician for the
Oklahoma State Cowboys
in Stillwater**

- Along with Tom Allen, D.O. and myself, started the sports medicine fellowship at OSU and it continued until Ken left the team physician position in 2005.

OSU side lines the three amigos

I have no conflict of interest and will not use off label recommendations of medication during this lecture

- To be able to visualize an issue an athlete has by and through observation
- To improve an athlete's performance through assisting the body to reach its best level of function and movement
- The objective of this lecture is to enable the ability to diagnose and treat musculoskeletal issues in the athlete

Quit whining. It's just a satchel for carrying them. No one's going to call it a "man purse".

AS A DISCIPLE, IT WASN'T EASY TO SNEAK AWAY FROM JESUS FOR A DAY OF GOLF.

Can't join you today, Lord. Got a cold.

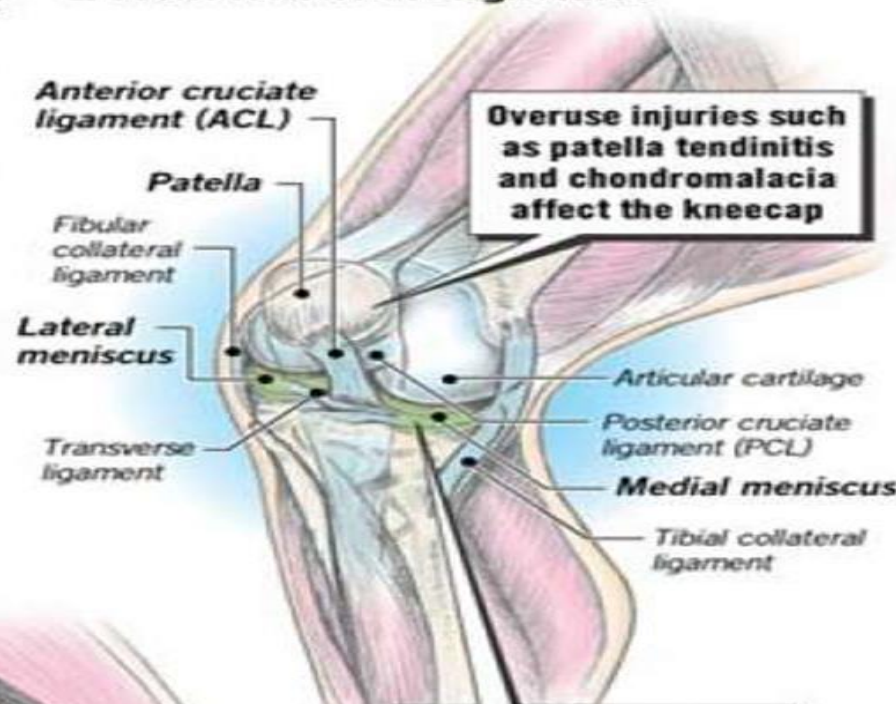

You're healed.

rats.

The knee is the largest and most functional of all human joints, with many asymmetries of design and function. The ligaments, especially the anterior cruciate ligament (ACL), form a complex structure that holds the upper and lower bones together and guides the knee when in motion. Nerves are embedded in the ligaments and signal stresses on the knee.

■ Front view of the right knee

■ Rear view of the right knee

Note: Veins, nerves and some muscles are not shown to preserve clarity of the knee area.

Sources: "Anatomy and Biomechanics of the Anterior Cruciate Ligament" by Dr. Scott F. Dye and Dr. W Dilworth Cannon Jr.; "Atlas of Human Anatomy" by Dr. Frank Netter.

Any Questions

If not, it has been a pleasure to share some of my memories and hopefully a pearl or two that you can use to help the athletes in your life.
